SUMMARY

Full-Stack Java Developer with hands-on experience in Spring Boot, React.js, PostgreSQL, and Microservices. Proficient in building secure RESTful APIs with JWT authentication, designing scalable backend systems, and developing responsive frontends. Passionate about solving real-world problems through clean, efficient, and production-ready code.

EXPERIENCE

Full-Stack Developer Intern *July 2025 – August 2025*

OccultHouse Pvt. Ltd.

- Developed 30+ reusable React.js UI components and integrated RESTful APIs for an e-commerce platform, improving responsiveness and data flow across the stack.
- Collaborated in an Agile team following component-driven architecture and modern full-stack best practices throughout the development lifecycle.

EDUCATION

Amity University Madhya Pradesh *Aug 2023 – Present*

B.Tech in Computer Science and Engineering | CGPA: 8.47

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript
- **Backend:** Spring Boot, Spring Security, REST APIs, Microservices (Eureka Service Discovery), Node.js, WebSocket, Redis
- **Frontend:** React.js, HTML, CSS, Tailwind CSS
- **Databases:** PostgreSQL, pgvector, MySQL, MongoDB
- **Tools & Testing:** JUnit, Git, Maven, Postman, Docker
- **Concepts:** Data Structures & Algorithms, OOP, JWT Authentication, RAG, Semantic Search

PROJECTS

TrustSpace – Full-Stack Venue Rental Marketplace GitHub | Live

React.js, Spring Boot, PostgreSQL, Spring Security, JWT, WebSocket, REST API

- Architected a full-stack venue rental marketplace with end-to-end booking workflows, 55+ RESTful APIs, and PostgreSQL-backed data management using React.js and Spring Boot.
- Implemented JWT-based authentication, RBAC with Spring Security, and WebSocket-powered real-time chat, supporting 3+ user roles and live host-renter communication.

VIKAS – AI-Powered Fashion Marketplace GitHub | Live

React.js, Spring Boot, Node.js, PostgreSQL, pgvector, Redis, RAG

- Built backend infrastructure managing 3000+ product catalog entries with semantic search via pgvector and a RAG-based conversational assistant for context-aware recommendations.
- Reduced API response latency by 60% using Redis caching and designed a store pickup reservation system streamlining checkout efficiency across multiple inventory workflows.

Microservices-Based User & Contact Management System GitHub

Spring Boot, Eureka, Spring Data JPA, H2, JUnit, REST API

- Designed a distributed microservices architecture with 2+ independently deployable services, Eureka service discovery, and RestTemplate-based inter-service communication.
- Secured 15+ REST endpoints with Spring Security, integrated Spring Data JPA for ORM-based persistence, and achieved 90%+ API validation coverage via JUnit and Postman.

CERTIFICATIONS

- REST API (Intermediate) and Java (Basic) Certificates — HackerRank
- From Relational Model (SQL) to MongoDB's Document Model — MongoDB (Credly)
- API Documentation Learning Path — Postman Academy
